A small vote of confidence to everyone who has helped me on my journey throughout Clevered on my journey to the end of the interactive calculator- Mrs. Kangana and Mani, my parents, Mr. Ken, websites such as Clevered and Snap etc.

Without your help and commitment, I wouldn't have been able to make it this far!

ABOUT ME..

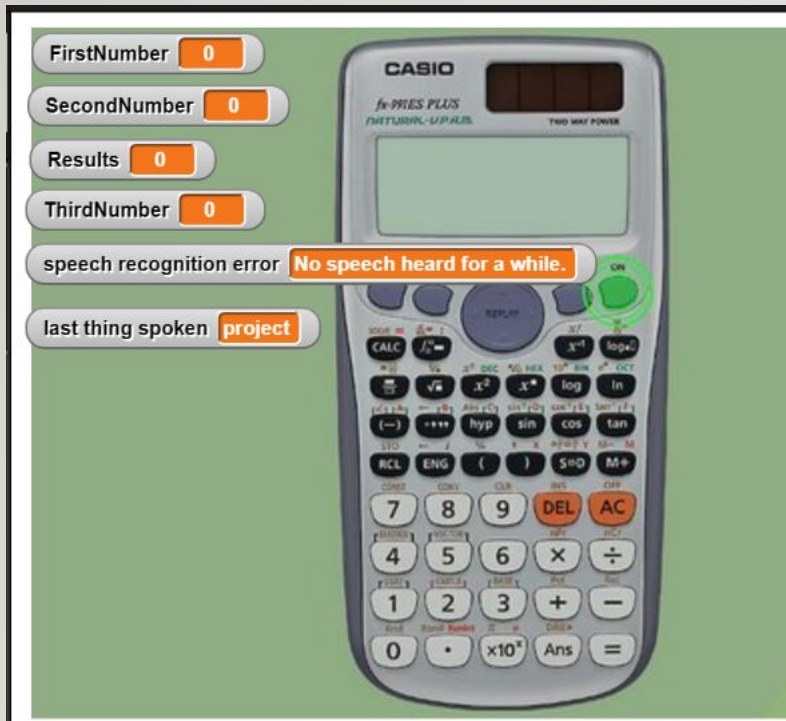

- **As I said earlier, my name is Muhammad Shaheer Khan, and I am 12 years old. I am from Pakistan, and I go to Gems Wellington International School in Dubai currently in Year 7.**
- **I don't have any profession as of right now, but I do have a range of hobbies, from chess to basketball to AI coding.**
- **What interests me about AI coding is that it allows a range of possibilities to solve problems and can make anything easy and convenient, meaning that it can very well change the world in, and it already has. It has saved millions of lives and can accurately predict anything which interests me as I love to gain knowledge.**

About My Internship with Clevered..

- I have really enjoyed my Clevered internship and have learned many, many things about coding and how it can be applied in the real world as well as how it can make a positive impact in a variety of ways.**
- I really have loved the opportunity under Mr. Ken's guidance as there are so many things to explore and learn from and use more advanced coding to further me in my coding journey with many cool things to use and learn how to make sure I correctly programmed all of them .**
- I have earned one badge for completing all my homework and another for completing the work to the highest standard and for consistently participate in lessons. Throughout my journey, I have had a lot of fun, and I am really liking this opportunity to intern under Mrs. Grover as she is nice and very interactive, meaning I learn many things from her.**

About App..

- **App's Introduction**
It's an interactive calculator using speech synthesis and speech recognition to help the blind and paralyzed people.

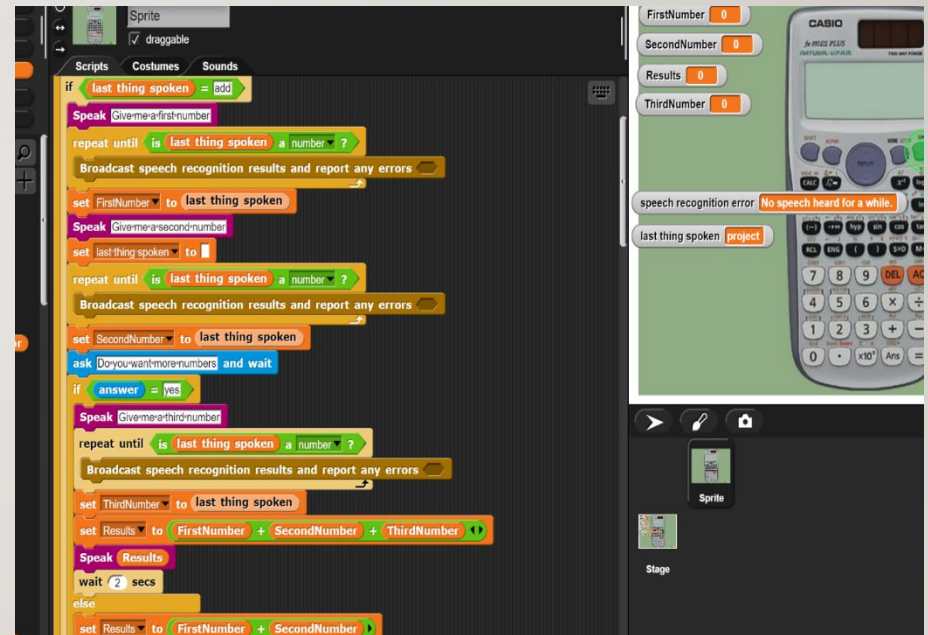

How do I use the App?

In this project, there will be a variety of speaking blocks that will cause the speech synthesis and a variety of listening blocks for the speech recognition. For this, first you will need to mention the sign that you would need to use e.g., Multiplication, division, addition etc.! After this, you need to mention the 2 numbers that you wish to be in the equation that the calculator will calculate for you. Next, it will ask you

OPTION NAME

(THIS WILL BE REPEATED FOR EACH OPTION OF THE APP)

- One thing that you should keep in mind is that you need to have a good internet connection in order to be able to use it and you need a microphone to be able to mention the calculation that you want to be done. There is a first number, second number, a third number and a result option.

Contact Person

-
- Please reach out to Shaheer Khan at shaheerkhankk@icloud.com for any questions/ concerns/ suggestions on the App.

THANK YOU!
